Subject: Devils Slide Review

On June 25th, Lynn and myself visited Holnam's Devils Slide Quarry for the purpose of evaluating existing soils within a proposed amendment area.

The amendment covers an area of 184.5 acres. The purpose of the amendment was additional area for waste dump construction. Because of topography and the planned dump height; only 118.9 acres of this total area will be affected. The remainder of the area is ridge-tops, which are above the ultimate dump height, therefore will not be impacted by the dump. Because of varying soil depths over the affected area, it was decided that an equivalent to an average of 10 inches of soil would be harvested.

Included in Holnam's June 7, 2001 review comments was a bid for the removal and replacement of 150,000 cubic yards of soil. If 10 inches of soil is harvested over the 118.9 acres of affected area, the amount of soil to be removed will be 191,825 cubic yards.

I contacted Ken George (Devils Slide) and requested that the contractor be advised of the change in quantities and asked to submit a new bid to include the additional yardage.

Ken stated that he would contact the contractor immediately and would submit the new bid to the Division as soon as it is available.

When this information is received I will be able to produce a bond amount for this submission.
